

Safety instructions for lime-based, paste-like plasters

- **1 **Product handling**:** Paste-like lime plasters contain alkaline components. Avoid direct contact with skin and eyes to prevent potential irritation or burns.
- **2 **Personal Protective Equipment (PPE)**:** Wear suitable protective clothing, such as gloves and goggles, to prevent skin and eye contact. As there is no dust formation, respiratory protection is generally not required unless additional volatile components are present, e.g. during grinding work.
- **3 **Ventilation**:** Even if there is no dust formation, good ventilation in the work area is advisable to minimise any vapours or odours. Especially when sanding the dried plaster.
- **4 **First aid**:**
 - - **In case of skin contact**:** Rinse immediately with plenty of water. If skin irritation persists, seek medical advice.
 - - **In case of eye contact**:** Immediately flush eyes with clean water for at least 15 minutes and seek medical attention immediately.
 - - **If swallowed**:** Rinse mouth with water (only if the affected person is conscious) and seek medical attention immediately.
- **5 **Storage**:** Store in a cool, dry place out of the reach of children. Always keep container tightly closed to prevent any change in product properties.
- **6 **Disposal**:** Dispose of product residues and packaging in accordance with local regulations and guidelines for building materials and chemical products.
